Reasons For Allowance

1. The following is an examiner's statement of reasons for allowance: Ono et al. (U.S. Patent No. 4,198,601) teach a hand-held microphone for transceiver wherein with the voltage controlled by the resistance 34, the display on the display device 4 is adjusted to an appropriate brightness (column 4, lines 35-37). Ogita (U.S. Patent No. 4,348,666) teaches a signal level display apparatus arranged so that an ac signal is superposed upon either an input signal or a reference voltage of a comparator to display the input signal with differences in degrees of brightness of illumination of light-emitting elements constituting a display unit when viewed externally, to thereby distinguish the level of the input signal which is closer to the level of the reference voltage from the level departing away therefrom (Abstract). Cheng (U.S. Patent No. 6,507,729) teaches a luminescent external dialer for mobile phone wherein the photosensitive circuit 26 of the external dialer 2 can detect the light in the environment. If it's too dark, the luminescent panel circuit 25 is triggered by the photosensitive circuit 26 to increase the luminescence of the device so that users can dial or input messages in the dark or gloomy surroundings (column 2, lines 60-65). However, prior art of record fails to teach, or renders obvious, alone or in combination, in a cellular phone having a display, a central processing unit (CPU), a photosensitive element on a surface, and a control circuit coupled to said photosensitive element, a method comprising the steps of: (a) switching said cellular phone to an automatic background brightness control mode; (b) measuring a voltage between two terminals of said photosensitive element by said CPU; and (c) adjusting a background brightness of said display with respect to said measured voltage as directly claimed in independent claim 1.
